

Watts in a Name...

In short-wave diathermy, "THERATHERM" is the name for power output—300 watts which, even in the busiest physiotherapy department, is ample for all requirements. Deep, penetrating heat is administered with ease and safety, a single control regulating output from zero to maximum. A wide range of applicators can be used, with all of which optimum circuit conditions are shown on a neon tube indicator. To guard against breakdown during extended use, each component is generously rated and the entire equipment built in the meticulous Marconi tradition.

The THERATHERM Ultra Short-Wave • Diathermy

THE ELMQVIST "JUNIOR" PORTABLE ELECTRO-CARDIOGRAPH

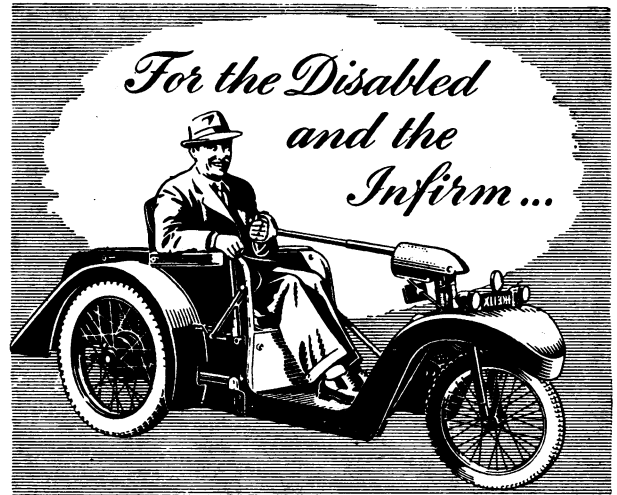

This portable apparatus, weighing 22 lbs. and operating from easily replaceable internal batteries, records through a single galvanometer on photographic film. A multi-position switch offers a selection of circuits which includes the Einthoven, Goldberger unipolar and Wilson leads, without alteration to the patient connections. Phonocardiograph attachment is available for simultaneous recording of the heart sound and a standard lead.

The ability to get about, to maintain daily interests and social contacts, plays an important part in the continued health and happiness of the disabled and the infirm.

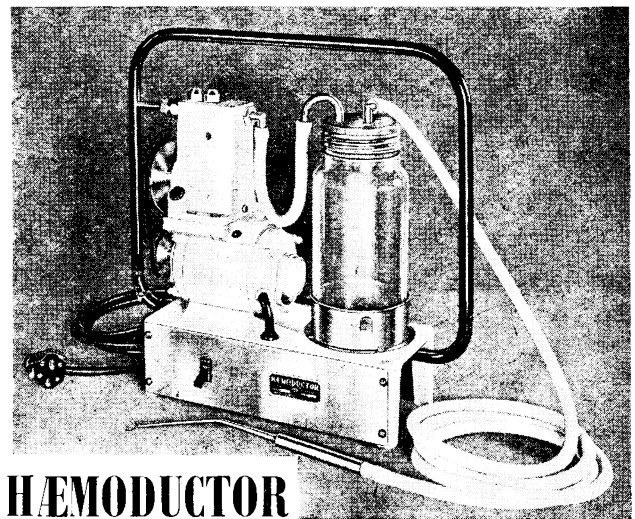

For this purpose the NELCO "SOLOCAR" is ideal. Electrically driven; silent, vibrationless and free from fumes; operated with one hand—effortlessly and without strain—it climbs any hill, travels 35 miles without re-charging, turns in its own length.

★ Agents in all parts of the Country.

HÆMODUCTOR

MODEL 'G'

PORTABLE ELECTRIC SUCTION APPARATUS

The HÆMODUCTOR Model 'G' fulfils all the requirements for a light, compact and portable electric suction apparatus for the efficient aspiration of refuse fluids from the field of operation. The small but powerful induction motor operating the single cylinder pump mechanism is specially designed to afford maximum efficiency. Supplied in two voltages, 200/220 v. and 230/250 v.
